

# **An Introduction to Numerical Modeling of the Atmosphere**

David A. Randall

# Contents

<b>List of Figures</b>	<b>vii</b>
<b>List of Tables</b>	<b>xiv</b>
<b>1 Introduction</b>	<b>3</b>
1.1 What is a model?	3
1.2 Elementary models	4
1.3 Numerical models	5
1.4 Physical and mathematical errors	5
1.5 Discretization	6
1.6 Physically based design of mathematical methods	8
1.7 The utility of numerical models	9
1.8 Where we are going in this book	10
<b>2 Finite-Difference Approximations to Derivatives</b>	<b>11</b>
2.1 Finite-difference quotients	11
2.2 Difference quotients of higher accuracy	15
2.3 Extension to two dimensions	24
2.4 Integral properties of the Laplacian	29
2.5 Laplacians on rectangular grids	31
2.6 Why be square?	32
2.7 Summary	34
2.8 Problems	34
<b>3 Approximating the Solution of a Differential Equation</b>	<b>38</b>
3.1 Introduction	38
3.2 The upstream scheme	41
3.3 The truncation error of a finite-difference scheme	41
3.4 Discretization error and convergence	43
3.5 Interpolation and extrapolation	45
3.6 Stability	47
3.7 What happens if we increase the number of grid points and cut the time step?	58

3.8	Summary	60
3.9	Problems	61
<b>4</b>	<b>A Survey of Time-Differencing Schemes for the Oscillation and Decay Equations</b>	<b>63</b>
4.1	Introduction	63
4.2	Non-iterative schemes	64
4.2.1	Explicit schemes ( $\beta = 0$ )	67
4.2.2	Implicit schemes	69
4.3	Iterative schemes	71
4.4	Time-differencing schemes for the oscillation equation	74
4.4.1	Non-iterative two-level schemes for the oscillation equation	77
4.4.2	Two-level iterative schemes for the oscillation equation	79
4.4.3	Computational modes in time	81
4.4.4	The stability of the leapfrog scheme for the oscillation equation	86
4.4.5	The second-order Adams-Bashforth Scheme ( $m = 0, l = 1$ ) for the oscillation equation	90
4.4.6	A survey of time differencing schemes for the oscillation equation	91
4.5	Time-differencing schemes for the decay equation	92
4.6	Damped oscillations	96
4.7	Nonlinear damping	97
4.8	Summary	101
4.9	Problems	102
<b>5</b>	<b>Riding along with the air</b>	<b>105</b>
5.1	Introduction	105
5.2	Conservative finite-difference methods	109
5.3	Examples of advection schemes with centered space differencing	118
5.4	More about computational dispersion	126
5.5	The effects of fourth-order space differencing on the phase speed	134
5.6	Space-uncentered schemes	134
5.7	Sign-preserving and monotone schemes	137
5.8	Hole filling	140
5.9	Flux-corrected transport	141
5.10	Lagrangian schemes	145
5.11	Semi-Lagrangian schemes	147
5.12	Two-dimensional advection	150
5.13	Boundary conditions for advection	153
5.13.1	Inflow boundaries	153
5.13.2	Outflow boundaries	160
5.13.3	Nested grids	170
5.14	A survey of some advection schemes that you might run into out there	176

5.15	Summary	177
5.16	Problems	178
<b>6</b>	<b>Just relax</b>	<b>182</b>
6.1	Introduction	182
6.2	Solution of one-dimensional boundary-value problems	183
6.3	Jacobi relaxation	186
6.4	Gauss-Seidel relaxation	191
6.5	The alternating-direction implicit method	193
6.6	Multigrid methods	194
6.7	Summary	197
6.8	Problems	198
<b>7</b>	<b>It's only dissipation (but I like it)</b>	<b>201</b>
7.1	Introduction	201
7.2	A simple explicit scheme	203
7.3	An implicit scheme	205
7.4	The DuFort-Frankel scheme	207
7.5	Summary	209
7.6	Problems	209
<b>8</b>	<b>Making Waves</b>	<b>210</b>
8.1	The shallow-water equations	210
8.2	The normal forms	212
8.3	Staggered grids for the shallow water equations	214
8.4	Dispersion properties as a guide to grid design	218
8.5	Other meshes	226
8.6	Time-differencing schemes for the shallow-water equations	227
8.7	Physical and computational reflection of gravity waves at a wall	235
8.8	The effects of a mean flow	237
8.9	Summary and conclusions	238
8.10	Problems	239
<b>9</b>	<b>Schemes for the One-Dimensional Nonlinear Shallow-Water Equations</b>	<b>241</b>
9.1	Properties of the continuous equations	241
9.2	The spatially discrete case	244
9.3	Summary	252
9.4	Problems	252
<b>10</b>	<b>Stairways to Heaven</b>	<b>253</b>
10.1	Introduction	253
10.2	Choice of equation set	254
10.3	General vertical coordinate	254

10.4	The equation of motion and the horizontal pressure-gradient force . . . . .	259
10.5	Vertical mass flux for a family of vertical coordinates . . . . .	263
10.6	Survey of particular vertical coordinate systems . . . . .	266
10.7	Vertical staggering . . . . .	290
10.8	Conservation of total energy with continuous pressure coordinates . . . . .	292
10.9	Conservation of total energy with continuous sigma coordinates . . . . .	295
10.10	Total energy conservation as seen in generalized coordinates . . . . .	299
10.11	Conservation properties of vertically discrete models using $\sigma$ -coordinates . . . . .	303
10.12	Summary and conclusions . . . . .	314
10.13	Problems . . . . .	314
<b>11</b>	<b>When the advector is the advectee</b> . . . . .	<b>316</b>
11.1	Introduction . . . . .	316
11.2	Scale interactions and nonlinearity . . . . .	316
11.2.1	Aliasing error . . . . .	317
11.2.2	Almost famous . . . . .	317
11.2.3	A mathematical view of aliasing . . . . .	318
11.3	Advection by a variable, non-divergent current . . . . .	320
11.4	Aliasing instability . . . . .	324
11.4.1	An example of aliasing instability . . . . .	325
11.4.2	Analysis in terms of discretization error . . . . .	329
11.4.3	Discussion . . . . .	331
11.5	Fjortoft's Theorem . . . . .	332
11.6	Kinetic energy and enstrophy conservation in two-dimensional non-divergent flow . . . . .	338
11.7	The effects of time differencing on conservation of squares . . . . .	351
11.8	Conservative schemes for the two-dimensional shallow water equations with rotation . . . . .	353
11.9	Angular momentum conservation . . . . .	359
11.10	Summary . . . . .	360
11.11	Problems . . . . .	360
<b>12</b>	<b>Finite Differences on the Sphere</b> . . . . .	<b>363</b>
12.1	Introduction . . . . .	363
12.2	Spherical coordinates . . . . .	363
12.3	The "pole problem," and polar filters . . . . .	366
12.4	Kurihara's grid . . . . .	372
12.5	Grids Based on Map Projections . . . . .	373
12.6	Unstructured spherical grids . . . . .	378
12.7	Summary . . . . .	382
12.8	Problems . . . . .	383
<b>13</b>	<b>Spectral Methods</b> . . . . .	<b>384</b>

13.1 Introduction	384
13.2 Solving linear equations with the spectral method	388
13.3 Solving nonlinear equations with the spectral method	390
13.4 Spectral methods on the sphere	394
13.5 The “equivalent grid resolution” of spectral models	399
13.6 Semi-implicit time differencing	400
13.7 Conservation properties and computational stability	401
13.8 Moisture advection	401
13.9 Linear grids	402
13.10 Physical parameterizations	402
13.11 Reduced linear grids	402
13.12 Summary	403
13.13 Problems	403
<b>Appendices</b>	<b>406</b>
<b>A A Demonstration that the Fourth-Order Runge-Kutta Scheme Really Does Have Fourth-Order Accuracy</b>	<b>406</b>
<b>Bibliography</b>	<b>415</b>
